

Macro Photography is it art?

This type of photography is done with either a specialty lens or a unique setting on your camera

On your camera or any digital camera the symbol at left is designates the Macro setting on your camera.

The more expensive the camera, the more macro potential you may have

DSLR's which can change lenses, you can purchase a special Macro lens which will give you improved results and much closer focus.

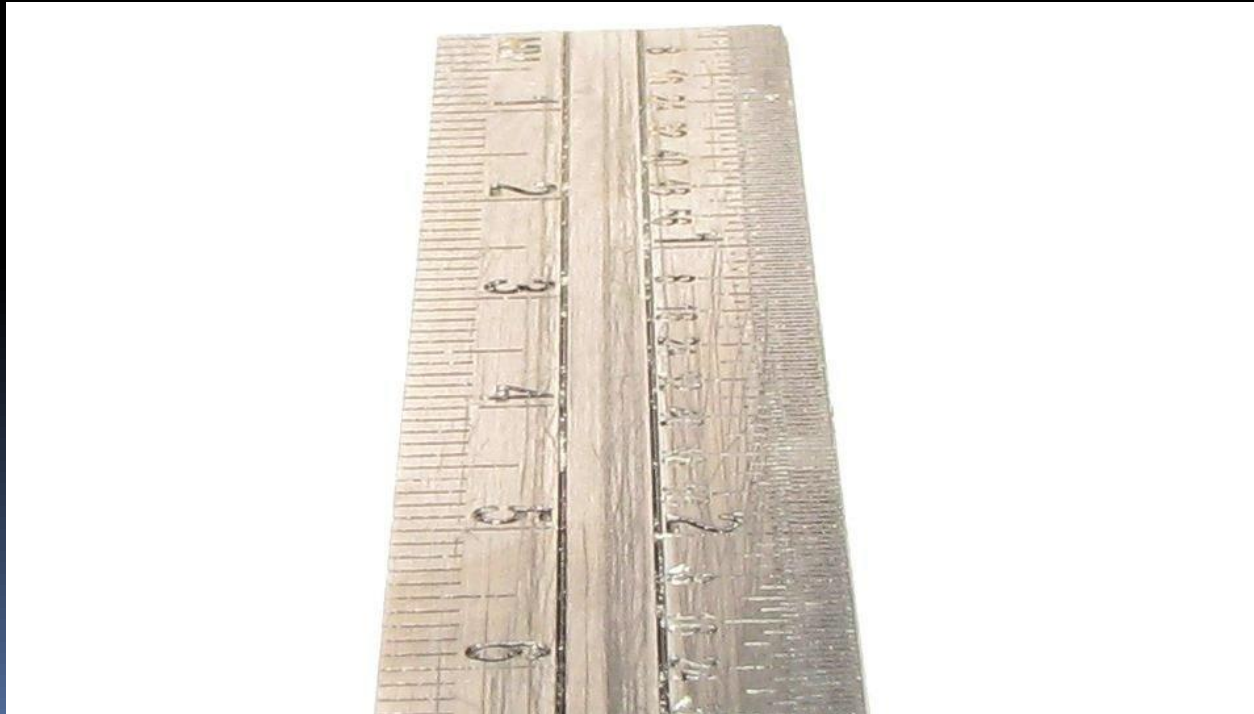

ALL THINGS PHOTOGRAPHY

With Macro Photography Depth of Field becomes a real issue. You must be very careful and methodical in your approach

Correct use of a tripod is very important. Left is the correct position for camera on a pod to take a macro shot, below is incorrect

You need light if you are going to do macro work successfully – there are various ways to add flash to it
